

Medianele

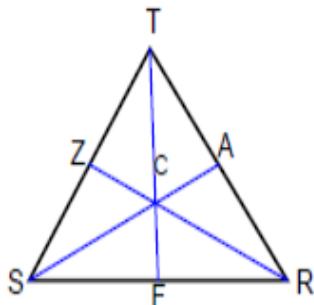

Ne reamintim:

Mediana este segmentul care unește varful unui triunghi cu mijlocul laturii opuse(adica împarte latura opusă în două parti egale).

Intersectia medianelor se află la o treime de baza și două treimi de varf.

Exemplu:

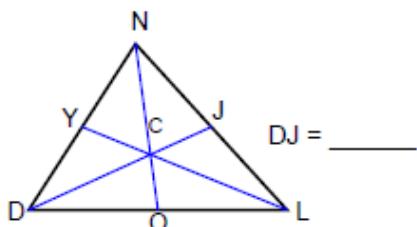

Dacă $SR=20$, atunci $SF=FR=20:2=10$

Dacă $TF=15$, atunci $CF=15:3=5$, iar $TC=5*2=10$

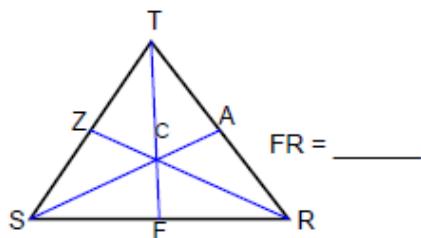

Dacă $CF=2$, atunci $TF=CF*3=6$

Dacă $TC=6$, atunci $TF=(TC:2)*3=9$

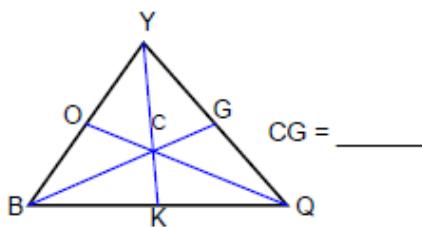

1) $CJ = 13$.

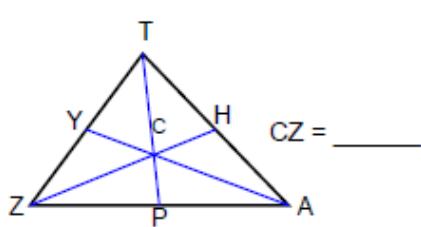

2) $SR = 12$.

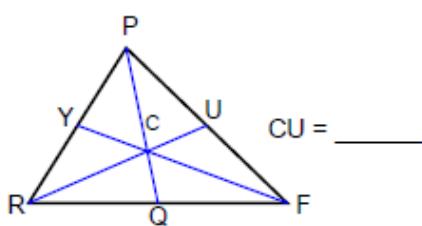

3) $BG = 30$.

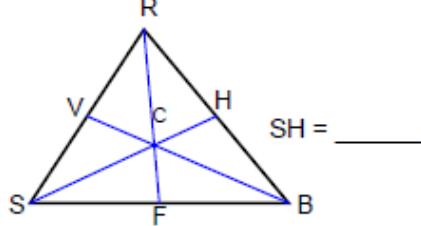

4) $ZH = 18$.

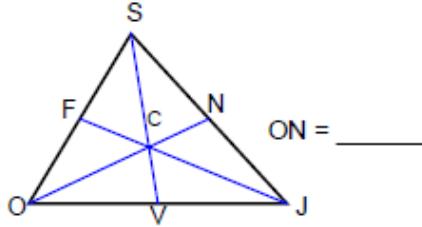

5) $RU = 9$. Find CU .

6) $CH = 13$.

7) $CN = 15$.

8) $YZ = 14$.
